

Accounts Needed From Client

Please create an account with each service below, then send over the credentials listed (via a password manager or secure share — not plain email/chat). We'll handle all the technical setup from there.

Service	Sign up at	Send us
Vercel (hosting)	vercel.com	Invite us as a collaborator on the project
Domain / DNS	your registrar	Login, or DNS-editing access
Supabase (database & login)	supabase.com	Project URL, anon key, service_role key (Project Settings → API). Pro plan recommended so the DB doesn't pause.
Resend (email)	resend.com	API key. Also verify your sending domain under Domains — we'll give you the DNS records to add.
Ziina (payments)	ziina.com	API key + webhook secret (business/KYC signup required — trade license & ID on hand)
Cron scheduler (optional)	cron-job.org	Only needed if not using Vercel Cron — free account is fine

Also send us

- Real business phone number (footer currently shows a placeholder)
- Email address for booking alerts (owner) and admin notices
- WhatsApp Business number, if you want a WhatsApp contact link added

Not needed for launch

- **Google Maps API key** — travel-time estimates work without it. Only relevant later if you want real traffic-aware drive times.
